Course: M 225 Sec. 02 (CRN 74965) 3 cr., Autumn 2017
Introduction to Discrete Mathematics
T, Th 11:00am–12:20pm in MATH 306

Instructor: Mark Kayll
Office: MATH 209
406.243.2403

Econtact: mark.kayll@umontana.edu
hs.umt.edu/math/people/default.php?s=Kayll

Prerequisites: one of M 162 (Applied Calculus), M 171 (Calculus I), or M 181 (Honors Calculus I),
or consent of instructor

Text: Discrete Mathematics: Elementary and Beyond, L. Lovász, J. Pelikán, and

Important Dates:
Labor Day Holiday Monday, 4 September;
last day to add by Cyberbear Monday, 11 September (5pm);
last day to drop by Cyberbear, or select Audit grade option Thursday, 21 September (5pm);
last day to add/drop by paper form Thursday, 2 November (5pm);
Veterans' Day Holiday Friday, 10 November;
Thanksgiving vacation 22–24 November;
last day to add/drop by petition Tuesday, 12 December (5pm);
last class meeting (during finals) Monday, 18 December 10:10am–12:10pm.

Description: This is an introductory course in discrete mathematics for computer science majors and
minors. It covers many of the mathematical concepts that provide the background for studying the
theoretical foundations of computer science. These concepts include elementary logic, sets, functions,
mathematical induction, recursion, combinatorics, and graphs. A major goal of the course is for the
students to become comfortable with reading and writing mathematical notation and to become competent
at constructing simple proofs. We will be guided by the Lovász et al. text, Chapters 1, 2, 3, and 4 of which
introduce the main course topics. In addition to covering most of the material in these chapters, we will
also study some more advanced material (graphs, trees, combinatorial probability) from Chapters 5, 7,
and 8 as time permits.

Learning outcomes: The official outcomes below are reflected in the description above; upon completion of this course, a student will be able to:
• gain an in-depth look at several central themes of discrete mathematics;
• reason mathematically and communicate ideas in a clear and concise manner;
• use induction and other techniques of mathematical proofs.

Assessment: Course grades are based on homework assignments, two term tests, and a final exam.
Traditional letter grades will be assigned using the +/− system (see UM catalog at catalog.umt.edu/
academics/policies-procedures/). UM’s policy on Incomplete grades will be followed (see UM catalog).

Tentative grading schedule:

<table>
<thead>
<tr>
<th>Item</th>
<th>Date(s)</th>
<th>Weight</th>
</tr>
</thead>
<tbody>
<tr>
<td>Homework</td>
<td>31 August — 12 December</td>
<td>20%</td>
</tr>
<tr>
<td>Test # 1</td>
<td>Thursday, 28 September</td>
<td>25%</td>
</tr>
<tr>
<td>Test # 2</td>
<td>Tuesday, 31 October</td>
<td>25%</td>
</tr>
<tr>
<td>Final exam</td>
<td>Monday, 18 December</td>
<td>30%</td>
</tr>
</tbody>
</table>

(over)
Homework: Assignments are set regularly, and a subset of the assigned problems is graded. The assigned problems represent only a minimal set of problems. You should do the more straightforward exercises on your own as a warmup. I recommend working additional problems whenever possible, especially in an area you find challenging. Keep in mind that the only way to learn mathematics is to do mathematics. Students are responsible for compiling their own ‘solution sets’, comprised of their own submissions, augmented by notes from meetings with other students and with the instructor.

I urge you to acquire the habit of staying on schedule with your reading and homework. This helps to maximize the material you’re able to absorb in class, meaning less effort preparing for tests.

Course Moodle pages: These are located at https://moodle.umt.edu/course/view.php?id=18909. This is a face-to-face course not making heavy use of Moodle. Nonetheless, students should check the Moodle site regularly to stay in tune with the course flow (announcements, homework, grade book, etc.).

Accommodation: The University of Montana assures equal access to instruction through collaboration between students with disabilities, instructors, and Disability Services for Students. If you have a disability that adversely affects your academic performance, and you have not already registered with Disability Services, please contact Disability Services in Lommasson Center 154 or 406.243.2243. The instructor will work with you and Disability Services to provide an appropriate modification.

General Remarks

On homework: Please use complete sentences, proofread, and polish your work prior to submission. Solutions should be clearly written, giving thorough explanations. Don’t assume your audience can read your mind. It often helps to look over your solutions before submission and ask yourself if a classmate could easily understand what you’ve written. You’re encouraged to type homework solutions unless your handwriting is clear. You may work with others on course homework, and you’re encouraged to do so; however,

Solutions should be written down privately in your own words.

If you use an important idea of someone else, then please acknowledge that person by giving an appropriate citation in your write-up. This professional courtesy will not affect your grade. Finally, please staple your assignments.

On exams: As noted above, there are two in-class tests and a final exam. The latter is cumulative with a slight emphasis on the material not covered by the in-class tests.

On make-ups: Make-ups for tests will not be given unless there is a valid excuse cleared with the instructor prior to the test. At least your most detrimental assignment will be dropped; thus, there are no homework make-ups.

On deadlines: Any stated deadlines are firm; please do not ask for extensions.

On electronic devices: Cell phones must be silenced during class meetings and office visits. Use of a cell phone during a test for any purpose other than as a calculator is grounds for earning a zero score on that test.

On conduct: All students need to be familiar with the Student Conduct Code; it can be found in the ‘A to Z Index’ on the UM home page. All students must practice academic honesty. Academic misconduct is subject to an academic penalty by the course instructor and/or a disciplinary sanction by the university.

Additional References

Combinatorics is the most fundamental, and hence the most important, branch of mathematics, since it deals with FINITE structures, and the world is finite.

Doron Zeilberger, Board of Governors Professor of Mathematics
Rutgers University
