

Cellular and Molecular Biology  
BIOB 260  
Autumn 2018  
Urey Lecture Hall 101, MWF, 9:00 AM-9:50 AM  
Discussion sessions: T or R, 9:00 AM-9:50 AM or 4:00 PM-4:50 PM

Scott Samuels  
Office: Clapp Building 207  
Telephone: 243-6145  
Email: [samuels@mso.umt.edu](mailto:samuels@mso.umt.edu)

Mark Grimes  
Office: Health Sciences 306  
Telephone: 243-4977  
Email: [mark.grimes@mso.umt.edu](mailto:mark.grimes@mso.umt.edu)

Office hours by appointment (arrange by email or phone).

Graduate Teaching Assistants: Lauren Foltz, Aaron Held, and John Sargeant

**Learning outcomes** are to understand life at the cellular and subcellular levels; to think critically and solve scientific problems; and to appreciate the role molecular processes play in modern biology. This course will emphasize biological principles, scientific concepts, and information syntheses while fostering an appreciation of cellular structure and function as well as the role of genes and genetic processes at the molecular level. Students will be able to:

- Given the thermodynamic and kinetic characteristics of a biochemical reaction, predict whether it will proceed spontaneously and the rate at which it will proceed.
- Recognize structures of the five major classes of building-block molecules that make up cellular macromolecules and membranes.
- Compare how the properties of water affect lipid membranes and the three-dimensional structures of macromolecules, and functional interactions between them.
- From their structures, predict which solutes will be able to diffuse spontaneously through a pure phospholipid bilayer membrane and which will require transport by membrane-associated proteins.
- Outline the flow of matter and energy in the processes by which organisms fuel growth and cellular activities, and explain how these processes conform to the laws of thermodynamics.
- Using diagrams, demonstrate how the information in a gene is stored, replicated, and transmitted to daughter cells.
- Describe how the information in a gene directs expression of a specific protein.
- Describe how cells are organized, the differences between typical prokaryotic and eukaryotic cells, and the role of membranes, organelles and cytoskeletal elements in energy and information transformations.
- Compare the ways cells convert extracellular signals into intracellular signals that transduce information to govern cell division, cell death, and cell differentiation.

**Required course prerequisites** are C– or better in BIOB 160 and CHMY 123 or 143.

### Grading

There are a total of 550 points to earn:

Four midterm exams, 100 points each; lowest curved score discarded (300 points total)

One final exam, cumulative, 100 points

Quizzes, 70 points total; lowest three scores discarded

Participation points, 80 points total; scaled from total clicker question points

The top 10 to 20 percentile of class will be awarded a grade of A or A-. The median score of the class will approximately set the cutoff between grades of B- and C+. A total score of 50% or less will be a failing grade (F). Pluses (+) and minuses (-) will be used (A, A-, B+, B, B-, C+, C, C-, D+, D, and D-). A CR grade is equivalent to a D- or better and a NCR grade is equivalent to an F. There are no opportunities for extra credit.

There are **no make-ups** for missed quizzes or clicker questions. Make-ups for missed exams are strongly discouraged, but requests with a compelling and verifiable excuse will be considered on a case-by-case basis.

You must submit your request to have an **exam re-graded** in writing to the professors within two weeks of the return of the graded exam and your exam will be completely re-graded.

**Exams and quizzes** will cover material from lecture, discussion sections, and assigned reading. Midterm exams are during class (9:00 AM) on September 21, October 17, and November 7. The fourth midterm exam and the final exam are given together at **8:00 AM** on December 12. All exams will be in Urey Lecture Hall 101. Exams will be normalized (using a Z-score). Quizzes will be in discussion sections. All exams and quizzes are closed book: no outside materials are allowed; electronic devices (including cell phones, translators, calculators, MP3 players, and others) are not allowed during exams or quizzes without the explicit permission of the professor. You must buy and bring a **SCANTRON form** for each midterm exam and the final exam.

**Clickers** will be used for participation points (1 clicker point for responding to 75% of questions in each class and 1 clicker point for each answer plus 1 additional clicker point for each correct answer, which will be scaled to 80 participation points). i>Clickers need to be registered online: [www.iclicker.com/remote-registration-form-for-classic](http://www.iclicker.com/remote-registration-form-for-classic). Enter your first name, last name, student ID (nine digits starting with 790) *without* hyphens, official UM email address (@umontana.edu), and i>Clicker remote ID (found on the back of your i>Clicker). Students will need to contact the instructor by the end of the first month of class if they cannot determine their remote ID or if there is another reason that their i>Clicker is not registered. i>Clickers will be used every day in class and students are responsible for bringing their remote daily (and perhaps extra batteries). Students are required to be in class to vote: use of clickers from a remote location is not allowed.

PDF files of lectures and supplementary material as well as videos of some lectures will be available to **download** from [Moodle](#).

An official UM email address must be used for **email correspondence** with the instructor, according to University policy. Grades cannot be discussed by email, according to FERPA.

Accommodations to ensure accessibility of **students with disabilities** will be gladly made, but to qualify you must be registered with Disability Services for Students (DSS). Arrangements for accommodations on exams must be through DSS and students must take the exam at the same time as scheduled for the class.

**Academic misconduct** will be reported and handled as described in the University of Montana Student Conduct Code. *All students must practice academic honesty. Academic misconduct is subject to an academic penalty by the course instructor and/or a disciplinary sanction by the University. All students need to be familiar with the Student Conduct Code.*

**Dropping course or changing grading status** will strictly follow the University policies and procedures, which are described in the catalog. Requests to drop the course or change the grading status to benefit a student's grade point average will not be approved.
