Anthropology 310: Human Variation  
Fall Semester 2017

Instructor:  
Dr. Meradeth Snow  
Meradeth.snow@umontana.edu  
Office Hours: 2-5pm Tuesdays in 219 Social Sciences & by appointment

Class Information:  
Tuesdays and Thursdays 11:00am-12:20pm in LA 106

Textbook & Readings:  
2. Supplemental readings & podcasts will be posted on the course Moodle site. These will provide material for discussion in class and are required reading/listening. Please note, you should approach each item critically: they are chosen more to make you think and not for memorization.

The Purpose of Anthropology 310:  
The goal of this course is to examine biological explanations for how variation arises among humans, as well as how studies of human variation influence society both past and present. We will consider genetic, phenotypic, sex, and behavioral differences among humans, as well as the theory, methods, and ethics involved in scientific studies of humans. Through the course students will be able to explain human variation from a biological perspective, understand, interpret, and react to current and future human biological studies and research. As this course fulfills a writing requirement, students are also expected to complete written work on a specific topic of interest and intelligently discuss multiple topics and readings related to human variation studies.

Grades:  
Exams:  
    Midterm Exam: 20%  
    Final Exam: 20%  
Research Paper:  
    Outline: 5%  
    Draft of paper: 5%  
    In-class presentation: 5%  
    Research Paper: 20%  
Problem Set: 10%  
Participation: 15%
MOODLE Online Materials:
This course will have a significant portion of the required materials posted to Moodle. It is advised that you regularly check this resource to ensure you are up-to-date on what you might need. Also, please note that your professor is not responsible for any trouble accessing the site that may arise, especially the night before an exam.

Examinations:
The midterm exam will be primarily made up of term identifications, short answer, and short essay questions. The midterm exam will test your knowledge and understanding of material covered from the start of class through Week 7.

The final exam will be entirely composed of multiple choice questions. It will test your knowledge and understanding of material covered during weeks 8-15, including the presentations based on student papers. Although the final is not technically cumulative, many concepts are; you may find terms and examples from the first half of the class helpful on the final exam.

Research Paper:
Your research paper will be written on a topic of your choice—something of interest to you within the realm of human biological variation, including all topics covered in this course. You are encouraged to talk to your instructor about your topic to ensure that it is suitable. You should have your topic chosen by the midterm (although nothing is required to be turned in at that time), and a significant amount of research completed before you turn in your outline.

The paper is composed of three parts: your outline, in-class presentation, and the paper itself. Detailed instructions can be found on Moodle in the document labeled Research Paper Instructions. Please note that an initial draft of your paper is due November 21st to obtain feedback before your final paper is due. You are also welcome to bring drafts to office hours before this date and will receive credit.

This course requires an electronic submission of an assignment stripped of your personal information to be used for educational research and assessment of the writing program. Your paper will be stored in a database. A random selection of student papers will be assessed by a group of faculty using a rubric developed from the following writing learning outcomes.

- Compose written documents that are appropriate for a given audience or purpose
- Formulate and express opinions and ideas in writing
- Use writing to learn and synthesize new concepts
- Revise written work based on constructive feedback
- Find, evaluate, and use information effectively
- Begin to use discipline-specific writing conventions (largely style conventions like APA or MLA)
- Demonstrate appropriate English language usage

The rubric score points are: (4) advanced, (3) proficient, (2) nearing proficiency, and (1) novices. This assessment in no way affects either your grade or your progression at the university.
Problem Set:
The problem set assigned to you will be distributed via Moodle and will cover information presented during the first half of the course. You will be asked to apply formulas and reason out problems applicable to human variation studies. A practice problem set will be distributed prior to this for you to complete and which will be solved during week 6. You will be graded on your work, how well it is labeled, your explanations, and the answers you obtain. This problem set may take quite a bit of time; do not wait until the last minute to begin! Also, please do not hesitate to seek aid from your professor—she is happy to go over answers and help ensure you understand all aspects of the questions.

Participation:
The participation portion of the class will be based on your contribution to classroom discussions that will take place throughout the semester. These will be primarily composed of answering written questions which will then be discussed as a group. Your attendance and thoughtful and respectful analysis of the assigned readings for the classroom discussion will be counted toward your grade. Several weeks will also have small assignments that will accompany the reading—these will be announced widely in class.

Make-up or Missed Exams:
Exams will not be re-administered unless approval is obtained at least 24 hours from the exam, with a legitimate excuse (such as health reasons, with a doctor’s confirmation). If you know you will miss an exam ahead of time you must make an appointment at least two weeks in advance to take it early.

Late Assignments:
Assignments submitted after the due date will not be accepted unless you have a documented, legitimate excuse and have contacted your instructor within 24 hours of the due date. Please contact your instructor well in advance if you know there will be a problem submitting your assignment. Email submissions will never be accepted.

How to Succeed in ANTY310:
Those students who have completed my courses successfully often display similar tendencies. I highly recommend taking these into account when judging what grade you hope to achieve in the course. These include:

1) Attend every lecture and take notes on the material.
2) Ask questions when confused about a topic or concept, in class or during office hours; well before an exam.
3) Complete readings before class, annotating or taking notes.
4) Participate in discussions of the material, either in class or with the TA and instructor.
5) Maintain a positive, self-motivated attitude.

Code of Academic Conduct:
With regard to academic dishonesty, this class has a zero-tolerance policy and will promptly deal with any acts of academic dishonesty (cheating, plagiarism, or unauthorized help on assignments, etc.) according to university policy. For further information on what falls into these
categories see: http://life.umt.edu/vpsa/student_conduct.php. If you have questions or concerns, please feel free to contact your professor.

**Students with Disabilities:**
Students with disabilities may request reasonable modifications by contacting your instructor. The University of Montana assures equal access to instruction through collaboration between students with disabilities, instructors, and Disability Services for Students (DSS). “Reasonable” means the University permits no fundamental alterations of academic standards or retroactive modifications. (For other options see http://www.umt.edu/disability).
